### DETAILED ACTION

This Office action is in response to the application filed February 28, 2002.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over VAN DAMME et al .

The claimed invention is drawn to an imageable element comprising, in order a substrate having a hydrophilic surface, an underlayer comprising a first polymeric material over the hydrophilic surface, and a top layer comprising a second polymeric material over the underlayer, in which: the second polymeric material is crosslinked,; the top layer is ink receptive and insoluble in an alkaline developer; the top layer and the underlayer are each removable by the alkaline developer following thermal exposure of the element; and the element comprises a photothermal conversion material.

VAN DAMME et al discloses a photosensitive element for lithographic printing plates comprising on a support having a hydrophilic surface a photosensitive layer and a thermosensitive layer wherein the thermosensitive layer may be crosslinked. This disclosure meets the claimed imageable element, see column 3, lines 20-30 of VAN DAMME et al.

VAN DAMME et al fails to explicitly disclose a crosslinked top layer in an example.

Art Unit: 1752

It would have been *prima facie* obvious to one of ordinary skill in the art of photoimageable elements to crosslink the thermosensitive top layer as suggested by VAN DAMME et al and reasonably expect same or similar results for making high quality printing plates.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. VERCHUEREN et al '036, '119, VERMEERSCH et al '689 and '663 and VAN DAMME et al '113 are cited of interest and are the US Patent version to the EP references submitted by applicant.
